

Environmental, Health and Safety Management Policy

TECHMETAL S.r.l. recognizes that environmental, work health and safety management are one of the most important company priorities, major factors for sustainable development, by settling policies, programs and procedures to carry out activities in an ecologically correct manner and in respect of physical and moral integrity of the workers.

TECHMETAL S.r.l. aims to:

- Continuously update the management system by analyzing the context, considering all internal and external influences, and identifying all the involved factors;
- Respect and enforce all the applicable laws and regulations, present and future, regarding the environment, work health and safety;
- Promote the responsibility to assure safety and healthy working conditions to avoid damages and occupational diseases ; all workers, included directorate, must made to feel responsible in the respect of environmental and safety regulations as well as promote precautionary behaviour.
- Continuously improve policies, programs and company conduct, considering technical progress, scientific knowledge, consumer needs, the expectations of the community and taking as starting point the compliance with mandatory regulations;
- Disseminate environmental, health and safety policy through information, training, consultation, employee and suppliers involvement for a responsible management of their activities in respect of the environment, healthy and safety as well;
- Evaluate the environmental aspects/impacts and all the possible risks for work health and safety during the manufacture of its products and services, in the planning of new activities before the disposal of a plant or the abandonment of a site, in the purchase of raw materials;
- Minimization of the negative environmental consequences both of the production of waste and of their safe and responsible elimination during the design, development and management of the plants, considering an efficient and safe use of energy, materials, and dangerous substances and preparations, as well as a sustainable use of renewable resources;
- Reduce both the environmental impact and health risks of its products and services from raw materials, products, processes, emissions and waste related to the company's activities, seeking to minimize the negative environmental effects through research and technological innovation;
- Promote the adoption of these principles by the suppliers and contractors who act on the company's behalf while encouraging and requiring improvements in practices to make them consistent with those of the company and encouraging its suppliers to adopt these principles;
- Develop and maintain active plans to face and manage emergencies in collaboration with the associated services, the competent authorities and the local community;
- Promote the dialogue with the employees and the public, anticipating and responding to their concerns about the potential environmental impact as well health and safety risks of its activities, products, waste or services;
- Measure and document its environmental and health and safety results by regularly carrying out audits and assessments regarding the compliance with company targets, regulations in force and these principles, periodically providing adequate information to the board of directors, shareholders, employees, authorities and public as required by the spirit of the Certification Regulations.
